key features

Links existing school together
Learning studios & collaboration
spaces
Energy efficient and sustainable
Fosters a connection to its
surroundings
Value for money/Life-cycle
approach
Stakeholder engagement

safety with ingenuity

connecting students
while fostering innovative
and healthy learning
environments

Langley Secondary School (LSS) upgrade and addition is a \$23 million, multi-phased project consisting of multiple upgrades to existing portions of the school, raising it up to current seismic code. A 2-storey, 4,000 m² addition was designed to replace portions of the existing school that will be demolished. The 2-storey addition is currently under construction and anticipated completion is 2020. The existing building was constructed in many different 'blocks' over the past 50 years and this new addition will serve as the link to connect the two remaining ends of the school together. Incorporating 21st Century design methods allows for greater collaboration among teachers and students.
